

Sergey Galichenko

DevOps Engineer | Systems Integration

sagalichenko@edu.hse.ru | sergeygalichenko.dev | github.com/CosmoCodeCraft

SUMMARY

Software Engineering MSc student at HSE University with hands-on experience in Linux administration, containerized environments, service networking, PostgreSQL and deployment automation. Systems engineering background spanning infrastructure, embedded systems and integration of software with physical equipment.

TECHNICAL SKILLS

Infrastructure: Linux, SSH, Nginx, UFW, fail2ban

Containers & Integration: Docker, Docker Compose, container networking, service discovery, PostgreSQL, FastAPI, REST/HTTP APIs

CI/CD & Automation: Git, GitHub Actions, Python, Bash

Programming: Python, Bash, C/C++

Networking & Systems: TCP/IP, HTTP, WebSocket, UART; Raspberry Pi, ESP32, ATmega328P

PROJECTS

SIRD - Intelligent Data Recognition System | DevOps / Integration Engineer, HSE University team project | 2026 - Present

- Built a reproducible three-service Docker Compose environment integrating independently containerized backend and recognition services with PostgreSQL.
- Resolved inter-container networking failure by replacing container-local localhost addressing with Docker DNS/service discovery; verified the complete HTTP request path through logs from both services.
- Verified PostgreSQL connectivity, SQL execution and data persistence across database-container recreation using a named Docker volume.
- Contributed to architecture review that reconsidered an early five-service decomposition in favour of fewer deployment boundaries and clearer responsibilities.

Docker | Docker Compose | PostgreSQL | FastAPI | Linux | HTTP

[Project case study](#)

City Farm | Engineer -> Project Lead, Moscow Polytechnic University | Feb 2024 - Jun 2025

- Rebuilt and hardened a Raspberry Pi Linux server after identifying security issues; configured SSH key authentication, UFW, fail2ban and Nginx.
- Integrated ATmega328P / ESP32 control components with Raspberry Pi systems and implemented local web-based equipment control.
- Led a multidisciplinary team of approximately 12 people across control-system development, experiments, integration and project delivery.
- Automated experimental log processing, statistical analysis and graph generation with Python.

Linux | Raspberry Pi | Nginx | Python | C/C++ | ESP32 | ATmega328P

[Project case study](#)

galichenko.dev | Software Engineering, personal project | Sep 2026 - Present

- Designed and deployed a static Astro / TypeScript portfolio and research archive with a custom domain and GitHub Pages hosting.
- Automated linting, type checks and static build/deployment through GitHub Actions.

Astro | TypeScript | GitHub Actions | GitHub Pages

EXPERIENCE

Pixel Programming & Robotics School | Programming Instructor | Dec 2025 - Aug 2026

- Taught programming and robotics, prepared development environments and troubleshooted software, dependency and network issues during classes.

Moscow Polytechnic University | Administrative Operations & Automation | Sep 2023 - Nov 2024

- Automated repetitive data-processing and document workflows with Python, reducing manual work in recurring university processes.

EDUCATION

HSE University - Faculty of Computer Science | MSc, System and Software Engineering | 2026 - Present

Moscow Polytechnic University | BSc, Control in Technical Systems - Electronic Control Systems | 2022 - 2026 | Graduated with honours

SELECTED RECOGNITION

Alfa-Future Scholarships - Winner, 2025 | **PIK Award** - Person of the Year in Research, 2025
